

PREWASH ULTRA

**Advanced Prewash Technology For 30% Savings
In Time, Water & Energy Smarter Cleaning With
Lower Environmental Impact.**

PREWASH ULTRA is specially developed to transform your cleaning process by breaking down heavy soiling faster, reducing rinse demand and delivering measurable operational savings, without changing your existing cleaning regime.

Proven in UK food manufacturing environments, PREWASH ULTRA helps you:

Reduce rinse times by up to 30% on challenging equipment

Cut water usage significantly, saving hundreds of litres per clean

Lower energy consumption through reduced hot water demand

Improve labour efficiency with faster, easier cleaning

At the same time, PREWASH ULTRA supports your sustainability goals with an EDTA-free formulation, designed to minimise environmental impact and improve wastewater.

Case Study

Time Savings

- Up to 30% faster rinse times
- Release production lines sooner
- Reduce cleaning window pressure

Water Savings

- Up to 375 litres saved per clean (per asset)
- Reduce effluent volumes
- Lower water costs immediately

Sustainability Impact

- EDTA-free chemistry (improved biodegradability)
- Reduced water usage = lower environmental footprint
- Supports retailer and ESG

Energy Savings

- Less hot water required
- Reduced steam demand and heat load
- Supports carbon reduction targets

Labour Efficiency

- Easier soil removal
- Less need for aggressive rinsing methods
- More productive hygiene teams

TESTIMONIAL STATEMENT

"Achieve faster cleans with less water, less energy, and less environmental impact, without compromising performance."
