

Protect Your Cows, Protect Your Profits

Synofilm GL

All-Season Post-Milking Teat Dip

Synofilm GL is a cutting-edge teat care solution, meticulously developed and field-tested in the UK for the unique needs of British dairy herds. Our in-house chemists have formulated a lactic acid and glycolic acid blend that provides superior protection against the damaging effects of cracked and chapped teats. Synofilm GL safeguards udder health and protects against costly infections by targeting mastitis pathogens.

Synofilm GL – Tip-Top Teat Care:

- **Ultimate hydration:** This new and improved formulation includes glycolic acid which gently removes dead skin cells, keeping teats supple and enhancing moisturisation.
- **Double-Threat Defense:** the combined action of lactic acid and glycolic acid effectively combats teat pathogens.
- **Brighter Orange for Better Visibility:** No matter the breed, the brighter colour of Synofilm GL lets you see exactly where you've applied the dip.
- **Soothing Citrus Shield:** A touch of citrus adds a pleasant scent while the emollient blend, including lanolin, forms a protective barrier on the teats surface.
- **Easy on You, Easy on Them:** Ready-to-use and with a simple post-milking application, Synofilm GL is a breeze to integrate into your milking routine.

The Science Behind the Strength

Before

After

Synofilm GL is rigorously tested and proven effective:

- **Passes European Standards:** Passes EN 1656:2019 and EN 17422, showing over a 99.999% kill rate against bacteria such as *S. Aureus*, *S. Uberis* and *E. coli*.
- **Year-Round Protection:** Specifically formulated to address common teat health challenges throughout the year.
